Creating and saving a file in Vim

Step 1: Create a file using Vim editor

```
File Edit View Search Terminal Help
[kodee@localhost ~]$ vim file1.txt
```

Step 2: To start typing, press the “I” key to get the insert option

The screenshot shows a Vim editor window with a dark background. The menu bar at the top includes 'File', 'Edit', 'View', 'Search', 'Terminal', and 'Help'. The first line of the file is 'Hello World'. The second line is 'This is a file created using vim', with the cursor at the end of the line. Below this line, there are several tilde (~) characters, indicating that the text continues on multiple lines. The status bar at the bottom shows '-- INSERT --' on the left, '3,33' in the center, and 'All' on the right.

Step 3: After typing, to Save and Exit first hit the “Esc” key and then enter “:wq”. This will be entered at the bottom and now you can hit enter
